

## Sean D Smith

Sean is based between Grantham and Peterborough in the UK, and is a director of an IT consultancy specialising in agile and lean software engineering, particularly on Microsoft-hosted projects. He has worked closely with Learning Tree International for many years as a trainer and course author, more recently providing development support in Learning Tree's skills assessment products and processes. He commutes regularly to London and overseas to undertake consultancy work, a significant part of the last few years being with the customer technology development team at Transport for London. A recent SFIA-related project he conducted involved the analysis of, and recommendations for restructuring the IS department at Learning Tree's head office in Reston Virginia.

- Several years of experience migrating software development teams in companies to agile or lean processes. Includes work analysing and advising on how to restructure failing agile processes in companies.
- Skills analysis and support of departmental restructuring and hiring programs to enable new software development methods to be employed effectively.
- Lengthy experience working with Microsoft development and database tools and architecture in a commercial environment.
- 35+ years of experience as a lecturer, trainer, and course author in software engineering disciplines.
